Java并发编程
并发编程三大特性
可见性
volatile关键字
内存屏障
指令重排
原子性
synchronized
锁
Atomic类
CAS
ABA问题
AtomicStampedReference
AtomicMarkableReference
LongAdder
LongAccumulator
有序性
happen-before
线程安全
线程状态
NEW
RUNNABLE
BLOCKED
WAITING
TIMED_WAITING
TERMINATED
wait()
notify()
notifyAll()
sleep()
yield()
join()
interrupt()
isInterrupted()
interrupted()
线程创建
继承Thread类
实现Runnable接口
实现Callable接口
FutureTask
线程池
ThreadPoolExecutor
corePoolSize
maximumPoolSize
keepAliveTime
workQueue
threadFactory
handler
execute()
submit()
shutdown()
shutdownNow()
isShutdown()
isTerminated()
awaitTermination()
ExecutorService
Executors
newFixedThreadPool()
newCachedThreadPool()
newSingleThreadExecutor()
newScheduledThreadPool()
newWorkStealingPool()
拒绝策略
AbortPolicy
CallerRunsPolicy
DiscardPolicy
DiscardOldestPolicy
自定义拒绝策略
线程池状态
RUNNING
SHUTDOWN
STOP
TIDYING
TERMINATED
ctl
workerCount
runStateOf()
workerCountOf()
compareAndIncrementWorkerCount()
compareAndDecrementWorkerCount()
Worker
runWorker()
getTask()
processWorkerExit()
addWorker()
tryTerminate()
interruptIdleWorkers()
interruptWorkers()
ScheduledThreadPoolExecutor
schedule()
scheduleAtFixed Rate()
scheduleWithFixedDelay()
DelayedWorkQueue
ScheduledFuture
ForkJoinPool
ForkJoinTask
RecursiveTask
RecursiveAction
CountedCompleter
invoke()
fork()
join()
invokeAll()
commonPool()
submit()
execute()
工作窃取算法
ForkJoinWorkerThread
ForkJoinWorkerThreadFactory
锁分类
悲观锁
乐观锁
公平锁
非公平锁
可重入锁
ReentrantLock
lock()
unlock()
tryLock()
lockInterruptibly()
newCondition()
Condition
await()
signal()
signalAll()
ReentrantReadWriteLock
ReadLock
WriteLock
读锁
写锁
锁降级
StampedLock
tryOptimisticRead()
validate()
readLock()
writeLock()
tryConvertToWriteLock()
tryConvertToReadLock()
tryConvertToOptimisticRead()
LockSupport
park()
parkNanos()
parkUntil()
unpark()
blocker
AbstractQueuedSynchronizer
AQS
state
getState()
setState()
compareAndSetState()
CLH队列
Node
waitStatus
CANCELLED
SIGNAL
CONDITION
PROPAGATE
acquire()
acquireInterruptibly()
tryAcquire()
tryRelease()
acquireShared()
tryAcquireShared()
tryReleaseShared()
ConditionObject
AbstractOwnableSynchronizer
exclusiveOwnerThread
setExclusiveOwnerThread()
getExclusiveOwnerThread()
Semaphore
acquire()
release()
tryAcquire()
available()
drainPermits()
reducePermits()
CountDownLatch
countDown()
getCount()
CyclicBarrier
await()
getParties()
getNumberWaiting()
isBroken()
reset()
Exchanger
exchange()
Phaser
register()
bulkRegister()
arrive()
arriveAndAwaitAdvance()
arriveAndDeregister()
getPhase()
getRegisteredParties()
getArrivedParties()
getUnarrivedParties()
onAdvance()
forceTermination()
ThreadLocal
set()
get()
remove()
initialValue()
withInitial()
ThreadLocalMap
Entry
InheritableThreadLocal
childValue()
getMap()
createMap()
TransmittableThreadLocal
Cleaner
Thread.Builder
